

What can **phase** create for you?

General Tools

- Quote/Estimate Systems
- Cost Calculators
- Decision Support Tools

Data Capture and Tracking

- Application Forms
- Registration Forms
- Customer Enquiry Tracking
- Customer Feedback
- Customer Complaint Tracking
- Document/Tender Submission
- Image/Photo/File Submission
- Surveys of any size
- Marketing Response Tools
- Public Comment Systems
- Online Petitions
- Wish Lists/Registries

Publishing

- News Publishing
- Event Listings/What's On
- Photo Galleries
- Document Distribution
- File/Package Distribution
- Web Diary/Blogs
- Directories
- Links Lists/Pages
- Dynamic/Adaptive Documentation

Extremely Specialised Versions of

- Catalogs
- Sales Channels
- Shopping Carts
- Other Business Processes

Private/Intranet Databases

- Sales Lead Databases
- General Task Tracking
- Customer Support Tracking
- Membership Databases
- Subscription Databases
- Call Centre Data Entry
- Database Query Tools
- Reporting Tools
- General Information Systems
- Web Views of Existing Databases
- Data Entry Systems

Complex Systems

Mix and match any of the examples listed above. Combine multiple functions into one integrated solution.

Implement arbitrary business rules on the data, enforce constraints, and embed automatic calculations.

Provide different public, private and privileged interfaces.

Protect your applications using one or more of:

- No Authentication (public)
- Single Password Protection
- User/Password Login
- Simple Admin Rights Flags
- Complex Role Based Authentication
- Multiple Users and Groups
- Access Control Lists
- External/LDAP/Apache Auth

Mix in extra functions like logging, audit trails, "For Printing" views, caching, generation to static HTML files, export to CSV, Excel or XML.

Add existing modules from the free Comprehensive Perl Archive Network to do, or connect to, just about anything.

Function and display are kept highly separate, for simplified layout and style changes. Add function without changing your existing graphic/web designer.

Testable prototypes can be made available on short notice.

Spec, build and deploy in as little as 24 hours.

Deploy to mass hosting environments, general web servers, intranet hosts, accelerated servers, or high-end clusters.

Arrange a one-off, well defined, and fixed scope project, or work with us over time to plan, schedule, iteratively implement, and "evolve" your software.
